Fund Performance vs Benchmark  
From 26 September 2006 to 30 June 2021

Benchmark : 50% in FTSE Bursa Malaysia Emas Index (FBMEmas) + 50% in 12 month fixed deposit Maybank interest

### Fund Strategy

The Fund will focus on achieving its objective by investing in a balanced portfolio consisting fixed income and equities.

The Fund's investment in bonds would consist of government and corporate bonds. The selection of bonds will depend largely on but not limited to the credit ratings of issuances and issuers strong creditability in meeting their financial obligations. The fund manager hold the option of investing into other fixed income assets such as money market instruments and/or deposits.

For the equity investments, the fund manager is selective in its strategy by focusing on quality stocks with strong cash flows, and stocks giving attractive dividend yields or the potential to do so. The fund manager will also take tactical investments in selected situational stocks with strong fundamentals.

This is a unit-linked fund offered by AXA AFFIN Life Insurance Berhad (AXA AFFIN). This Fund Update is prepared by AXA AFFIN for information purposes only. The past performance figures shown are not indicative of future performance. Each investment fund is subject to market fluctuations and to risk inherent in all investments. The price of units of any investment fund may go down as well as up. Please refer to the Fund Fact Sheet for further details. While your insurance consultant may provide you with financial information as stated in publications authorised by the Company, you should make your fund allocation based on YOUR OWN judgement and personal circumstance.

## Active Balanced Fund

Fund Update June 2021

### Market Outlook

For the month of June, the KLCI fell 3.2% to close at 1,533 points. Meanwhile, the S&P 500 gained 2.3% and the MSCI Asia ex-Japan slipped marginally by 0.4%.

On the economic front, 1) the Consumer Price Index rose 4.4% y-o-y in May, easing from 4.7% y-o-y registered in April and undershot Bank Negara Malaysia's projection of 7% for the month. ; 2) Rating agency S&P affirmed Malaysia's credit rating at A- while keeping a negative outlook. ; 3) Malaysia's Industrial Production Index jumped a record 50.1% y-o-y in May on the back of MCO1.0's low base effect last year and robust external demand.

On corporate developments, 1) MMC Corp Bhd's controlling shareholder Seaport Terminals (Johor) Sdn. Bhd. has announced its plans to privatize the group via a capital reduction and repayment exercise. ; 2) Axiata Bhd and DiGi.com Bhd has agreed to merge their domestic telco operations. ; 3) Malayan Banking Bhd's group CEO Datuk Amirul Feisal Wan Zahir is said to take over as the CEO of sovereign fund Khazanah Nasional Bhd. ; 4) Kuala Lumpur Kepong Bhd has proposed to acquire a 56.2% stake in IJM Plantation Bhd for RM1.5bn.

In terms of fund flows for Malaysian equities, foreigners remained net sellers in the month of June with a total net outflow of –RM1.2bn taking YTD net outflow to –RM4.2bn. Selling activity was mainly concentrated in the glove and banking names. Local institutions maintained net sellers for the month at –RM1.2bn with selling activity mainly concentrated in the glove, plantation & small cap names.

It was another tough month for Malaysian equities as stubbornly high COVID19 cases and challenges posed by the Delta variant has the government to re-implement strict lockdown measures across the country. This jittered domestic investors and we saw weakness in the general market, particularly the recovery names which overshadowed the progressive ramp up of vaccination efforts. Over the month, the government has also announced the National Recovery Plan and in a nutshell, relaxation on the ongoing lockdown will only take place with 10% of the population fully vaccinated and daily cases fall below 4,000/day. Following up, another RM150bn stimulus package, PEMULIH was announced of which RM10bn is direct fiscal injection. Another dampener in the market are increasing political noises with continued newsflow on potential shifts in political power blocs and calls by the royal audience for Parliament to reconvene.

We believe major Central Banks are unlikely to raise rates anytime soon and will take a wait-and-see approach to see sustainability of economic data and inflation trend amidst downside risks. However, global monetary policy normalization could take place as early as 2022 as global growth is expected to improve due to ramp up of global vaccination.

For Malaysia, we opine OPR to remain unchanged at 1.75% during next MPC meeting in July as current monetary stance remain accommodative. However, the downside risk has increased due delay in reopening of the economy due to still high covid cases. On this note, Malaysia's GDP has been revised downwards to 4.5% from 6.0% by the World Bank.
